Marine Technical Solutions as a Group of Companies and EPC contractor was established in 2010 with the purpose to incorporate its capabilities, enhance presence in the market and provide to the customers the highest quality services in the field of engineering, revamps, ship modernization, metalworking, construction and commissioning.

The headquarters is located in the United Arab Emirates, Dubai, which allows us to be as close as possible to our client. The group of companies has about 50 employees, its own production site and facilities for the production of metal structures.

Company structure

LLC Marine Technical Solutions as main company specializes in providing to the customers the mobile and **underway ship repair 24/7**, installation Ballast Water Treatment Systems and any other kinds of marine technical re-equipment in the world.

LLC Metallstroi was established as a main production facility for engineering services, manufacturing of steel construction and metalworking. It has fully equipped production site located in Kaliningrad with the production capacity more than **150 ton per month**.

LLC MontagTruboprovodStroi was created as a main construction entity for the project execution, erection and commissioning.

Marine Technical Solutions (MTS) is (an)

- Authorized official representative of FiberSol GmbH and Alfa-Laval in Russia;
- Official supplier of the Alfa-Laval ballast water treatment systems (BWTS);
- Worldwide experienced integrator of ballast water treatment systems (BWTS) since 2010;
- Experienced company specialized in ship modernization, revamps, overhaul projects and engineering systems design;

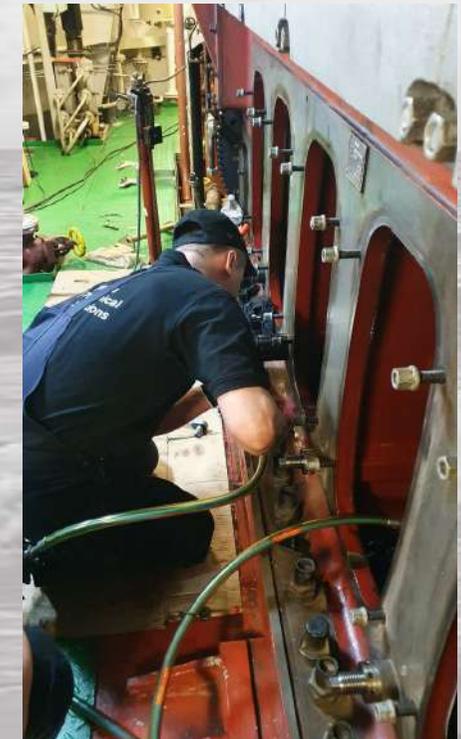

Our **certified** team consists of experienced and educated experts who posse a strong background in the following field of work:

- Wide range of pipeline hull and deck works (welding of steels and alloys, Copper, Titanium, Fiberglass pipes (GRA / GRE / GRV), Super duplex, etc.);
- Welding seams non destructive testing;
- Assembly and dismantling hull works as well as deck devices and equipment;

- Integration of ballast water treatment systems (BWTS) using both steel tubes and GRA / GRE / GRV ones;
- Electrical, Control & Instrumentation (EC&I) of ship cranes;
- Painting;
- Repair and maintenance of marine engines such as MAK,MAN and many others.

All work is carried out in accordance with the rules and standards of all international classification societies and national maritime authorities.

LLC Metallstroi as a production site possesses the following metalworking equipment:

- Drilling bench machines;
- Bending machine;
- Kemppi TIG, MIG Welding Machines;
- Lathe machine;
- Plasma cutting machine.
